GERMAN NAVAL YARDS wins contract to build the second Integrated Marine Rescue Centre (iMERZ) for the German Navy

Kiel, 30.03.2023. **GERMAN NAVAL YARDS receives the order for the engineering and construction of the Intergrated Marine Rescue Center (iMERZ) for the combat support ship (EGV) BERLIN.**

The contract signing took place on 30 March 2023 at the Federal Ministry of Defence in Berlin. Mrs. Lehnigk-Emden, the new President of the BAAINBw and Rino Brugge, CEO of GERMAN NAVAL YARDS, jointly signed the contract for the "i-MERZ EGV BER" project.

"We are extremely pleased to make another important contribution to the operational readiness of the German Navy. This is yet another demonstration of our capabilities. This contract underlines the trust placed in us by the public sector and is a cornerstone for us as a growing naval shipyard to ensure a steady workload until the end of 2028," says Rino Brugge, Managing Director of GERMAN NAVAL YARDS.

Last year, GERMAN NAVAL YARDS also installed the iMERZ I on the sister ship EGV FRANKFURT AM MAIN. Like the iMERZ I, the iMERZ II will be integrated as a permanent deckhouse into the EGV. With a length of 174m and a displacement of 20,200t, the three supply vessels of the supply ships of the 702 class (also known as the Berlin class) are the largest seagoing units of the German Navy. Compared to the

original container-based concept, the fully integrated solution optimizes medical supply processes and provides improved connectivity to the ship. With an infirmary, two operating theatres, an X-ray room, a dental department, various laboratories and state-of-the-art medical technology, iMERZ I and II provide the German Navy with two fully-fledged and comprehensive hospitals at sea. The iMERZ enables comprehensive accident surgery and intensive medical first aid for our soldiers at sea - anywhere, anytime and to full extent. In addition, the German Navy will be able to provide valuable support in humanitarian aid missions, such as after the tsunami disaster in Southeast Asia in 2005, and to provide medical care where it is urgently needed.

About GERMAN NAVAL YARDS:

GERMAN NAVAL YARDS specializes in the design and construction of large naval vessels such as frigates, corvettes and offshore patrol vessels. Originating from the shipbuilding of Howaldtswerke-Deutsche Werft GmbH (HDW), the shipyard team looks back on more than 180 years of shipbuilding tradition. Numerous vessels of all frigate classes with which the German Navy currently operates, have been built at the Kiel shipyard. The efficient infrastructure includes the largest dry dock in the Baltic region (426 meters long) and the 900-ton gantry crane.
